Adobe Acrobat Reader Troubleshooting Guide

If you can read this page, your Acrobat Reader program is working correctly! But you may still have problems or specific issues, such as printing and saving your downloadable file.

My printer won't print the text correctly

Almost all printing problems are due to not enough free system resources memory. The files are very memory intensive because they include graphics, text, and photos. Close all other programs/applications and print directly out of the Acrobat Reader program, not your Web browser.

Patterns are not printing full-size

Make sure your printer is set to print at 100 percent, "print to fit" is not checked and "page scaling" is set to "none". These settings are selected in the printer setup or printer options.

I can't find my file now that it's downloaded

Rather than viewing the plan in your browser, you must save it to your hard drive. Download the file again, except this time try right-clicking on the red download button. A menu window will open. Select "Save target as" or "Save link as" to save the file to your hard drive. Once saved, you can open it up with Adobe Acrobat Reader.

For more details on using Adobe Acrobat Reader please visit our online help section at: **woodmagazine.com/adobe**

Cherry

Simply Elegant Hole-saw Bracelet

Spalted maple

Make unique jewelry using only a few tools and some choice pieces from your scrap bin.

Purchase the holesaws and glue needed for this project. woodmagazine.com/holesawkit

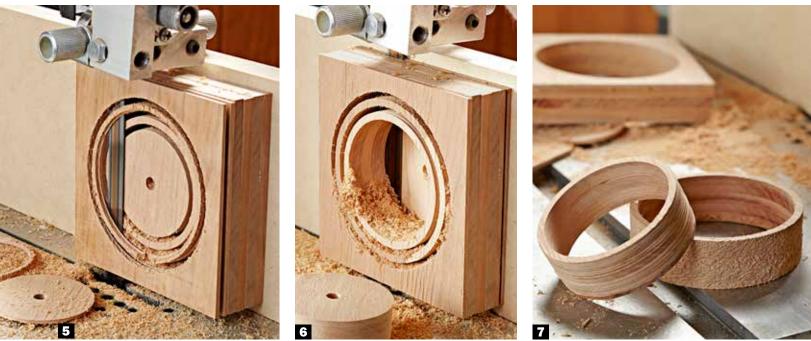

Laminate a blank. Cut thin stock (we used ¼" thick cherry) into 4×4" squares. Laminate them, face to face, alternating grain direction with each layer.

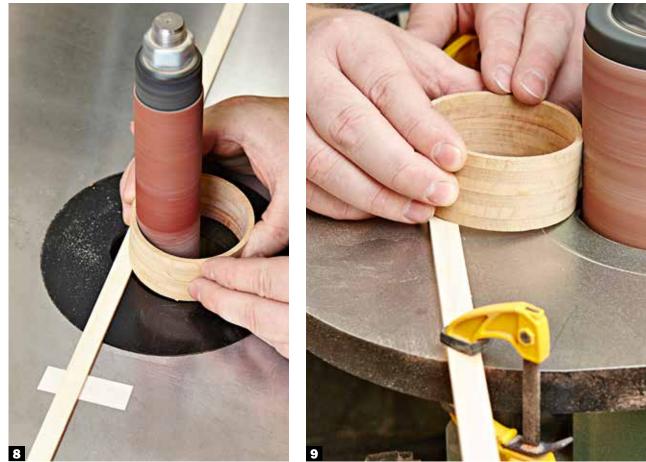

Define the outside diameter. Glue the blank to a carrier board. Clamp the carrier to your drill press table after the glue dries. Then, bore a 344"-diameter circle through the blank and 48" into the carrier board. Plunge slowly for best cut quality.

Free the rings. Cut the blank at the bandsaw so that the bracelets' outside laminations end up the same finished thickness. Begin with the cut on the outside face; the second cut releases the bracelets from the carrier board.

Produced by Nate Granzow with John Olson Project design: Dr. Paul Kincaid, Lawrence, Kan.

Tip! No oscillating spindle sander? Use your drill press equipped with a sanding drum instead.

A bevel adds comfort and good looks. Cut a ¹/₈"-thick piece of scrap and tape it next to a sanding drum. Sand bevels on the inside profile by slowly and steadily rotating the bracelet. Feel the bevel for smoothness as you work. Repeat for the outside profile. Hand-sand the inside and outside of the bracelet to 320 grit, then apply a finish. We wiped on several layers of CA glue and polished to a high shine. Start with 400-grit sandpaper, sand in steps to 800-grit, then polish the bracelet with 0000 steel wool.
